

Supplementary Figure S1 compares the six participant-facing formats using the same underlying stage: Pair 1, gradual trajectory, Stage 1, describing a moderate fever with experimental urgency score 3. Because this stage falls in the Low category, only green is active in the coloured displays. The complete experimental mapping was Low 0–4 (green), Moderate 5–12 (yellow), High 13–20 (orange), and Critical 21 or higher (red).
